IPC-9194

Implementation of Statistical Process Control (SPC) Applied to Printed Board Assembly Manufacture Guideline

Developed by the Statistical Process Control Subcommittee (7-22) of
the Process Control Management Committee (7-20) of IPC

Users of this publication are encouraged to participate in the
development of future revisions.

Implementation of Statistical Process Control (SPC) Applied to Printed Board Assembly Manufacture Guideline

1 SCOPE

The IPC-9194 should be used in conjunction with IPC-9191. The IPC-9191 provides general guidelines for implementing SPC in electronics industry.

This standard is intended to aid in interpretation of the requirements in IPC-9191 specifically for Printed Board Assembly (PBA) manufacture. This standard promotes process thinking and control of process inputs, in-process parameters and process outputs, including product parameters. The standard organizes various aspects of process control in the Plan, Do, Check and Act (PDCA) cycle.

1.1 Purpose Purpose of the IPC-9194 is to establish practical guidelines for implementation of SPC in the electronics manufacturing operations for continually improving processes and reducing waste.

The standard includes establishing conditions for SPC, implementation of SPC and sustaining SPC. The Implementation phase includes the following elements:

1. Preparation
2. Set up and Process Characterization
3. Practicing SPC
4. Monitoring Effectiveness of SPC
5. Improving Process Capability

Successful implementation of SPC is contingent on effectiveness of the quality management system that includes controlled documentation, calibration, corrective action and management review elements.

1.2 Interpretation “Should” and “may” are used whenever it is necessary to express nonmandatory provisions.

“Will” is used to express a declaration of purpose.

“Applicable” reflects mutual agreements between customer and organizations.

“Documentation” is factual or substantial support for statement made.

“References” are intended to clarify and to add information not to be used as auditable criteria. Any reference is noted by the author’s last name, followed by the year of publication in parenthesis.

“Examples” provide additional information only and are not to be interpreted as requirements. These examples are shown in the outlined sections.

“Where appropriate” indicates the organization is expected to provide rationale for appropriateness.

3 TERMS AND DEFINITIONS

Terms and definitions **shall** be in conformance with IPC-T-50 and as defined in IPC-9191.

4 SPC OBJECTIVES

4.1 General and Specific Objectives General objectives of Statistical Process Control (SPC) are: Increasing knowledge about the process; steering a process to behave in the desired way; reducing variation of final-product parameters, or in other ways improving performance of a process.
